## 1.1 INTRODUCTION

Have you ever felt like today you do not have the strength to do your daily tasks? If yes, then this is exactly where our company KAMKAJ.PK comes in. We provide services which include Electrician, Mechanic, Plumber, Maid and Gardening.

## 1.2 SCOPE OF PROJECT

There are five workers in every profession by default, the user will login, select the type of worker he wants and then select the worker he wants. The worker can also see the hourly rate of every worker and choose accordingly. The worker will have an option if he wants to select or reject the work from the user. The worker can also check his earnings which he has earned through our app.

## 1.3 UML DIAGRAM

## 1.4 SEGMENTS OF DIAGRAM WITH EXPLANATION

The class account has a start function that asks the user if he wants to sign up or login. Then the functions signup and login are then used to log in to user account.

The user account has function info that asks the user whether he wants services or wants to check his orders. The function professions ask the user to select a particular type of profession for which he wants the worker to complete a specific task.

Class workerAccount also has the generic functions of signup, login and forget password. When a worker signs up then he selects a profession. After logging in the worker can check what orders, he has received and he can select which order he wants to accept, and the rest will be rejected. The worker can also check how much he has earned through our app.
